Danish-Ukrainian Engineering company expands to North America

BIIR Consulting Engineering Company has enjoyed much growth and success since formation in Denmark in 2008. Clients include Vestas Wind Systems, the world's largest supplier of wind turbines; with BIIR Engineering recognized on many Vestas wind turbine patents.

Worldwide economic and technology trends have greatly increased customer demand for BIIR's high quality work in product research and development. The global trend is for companies to outsource the full range of engineering tasks, and constantly lower development costs.

In 2013, BIIR Engineering opened its first office in Ukraine, recognizing the country's strong tradition of education in engineering, math and science. In the past 10 years, Ukraine has become a major exporter of outsourced information technology and computer programming services. Since moving to Odesa, the Ukrainian BIIR subdivision has grown to a staff of 130 people; mostly engineers, who provide consulting services for western industrial companies. BIIR's multidisciplinary team of mechanical and electrical engineers, project managers, and designers have completed projects for many international clients.

BIIR Ukraine has received numerous awards for outstanding engineering work and business growth. But, BIIR is also well respected in Ukraine as a highly ethical company that plays by the rules, pays their taxes, and regularly sponsors educational, civil, and cultural programs.

BIIR provides engineering outsourcing, mechanical product design; finite element analysis; advanced 2D and 3D drawing and modeling, and design of complex mechanical products, including wind turbines, renewable energy equipment, helicopter engineering, production machinery, and oil and gas equipment.

BIIR Electrical Engineers can design power supplies, chargers, AC Variable Frequency Drive systems, and provide complete electronic circuit design, drafting, and schematics.

BIIR also has advanced software development skills in Ukraine, including embedded processing, the Internet-of-things (IoT), Big Data, C++, SCADA, PLC and HMI programming. BIIR has engineers that are native speakers of English, Danish, German, Ukrainian, Polish and Russian.

BIIR Engineering has designated UA Industrial Company (UAIC) as their North American representative; UA Industrial Company is a Ukrainian American Electrical Engineering company with dozens of years of experience in all areas of industrial automation. BIIR and UAIC are looking to build long-term partnerships with OEMs, manufacturers, contractors, and other engineering companies.
